

Syllabus Form of Academic Discipline

№	Field name	Detailed content, comments
1.	Name of the faculty	Faculty of Infocommunications
2.	The level of higher education	Bachelor's
3.	Code and title of specialty	172 – Telecommunications and Radio Engineering
4.	The type and title of the educational program	Educational Program Infocommunication Engineering
5.	Code and title of the discipline	_____ Designing devices on microcontrollers and FPGAs. Modeling of digital signals by means of MATLAB and VHDL
6.	Number of ECTS credits	2
7.	The structure of the course (distribution by type and hours of training)	2 ECTS credits: 6 h. – 3 lecture, 18 h. – 9 laboratory works, 4 h. – 2 consultations, 32 h. – independent work, type of control: exam.
8.	Schedule (terms) of study of the subject	2 Course, 4 semester of study (1 Course, 2 semester of study, for a shortened form of study)
9.	Prerequisites for learning the discipline	Disciplines that must be studied before: Higher Mathematics, Programming, Basics of Circuitry
10.	Abstract (content) of the discipline	Mandatory discipline of basic (professional) training, contains the following content modules: Mathematical bases of digital processing, Analysis of digital filters, Synthesis of digital filters
11.	Competencies, knowledge, skills, understanding that a higher education acquirer has in the learning process	<ul style="list-style-type: none"> - be able to perform computer modeling of devices, systems and processes using universal application packages; - be able to use computer-aided design systems for the development of devices for infocommunication systems and networks; - be able to develop algorithms and programs for microprocessor technological control processes and services of info and telecommunication systems and networks.
12.	Learning outcomes of a Higher Education applicant	<ul style="list-style-type: none"> - calculate the spectral, temporal and correlation characteristics of discrete signals, find their Z - image; - determine the system function of digital filters (DF); - calculate the time and frequency characteristics of the CF; - to build structural schemes of CF in direct, canonical, cascade and parallel forms; - synthesize filters with infinite and finite pulse characteristics (HIX and CIX filters).
13.	Assessment system in accordance with each task for taking tests/exams	<p>To obtain a positive assessment with PPMP. Modeling of digital signals using Matlab and VHDL students must know the types and models of discrete signals, their time, spectral and correlation characteristics, methods of direct and inverse Z-conversion, the characteristics of digital filters; methods of analysis and synthesis of digital filters; examples of application of digital filters.</p> <p>Students must complete and defend laboratory work. The credit is assessed by a rating, which is defined as the number of points obtained by the student during the semester</p>

		on a 100-point scale.
14.	The quality of the educational process	Adherence to the principles of academic integrity (http://lib.nure.ua/plagiat). Update of the work program of the discipline - 2020. The laboratory workshop uses modern software MatLab.
15.	Methodological support	<p>Complex of educational and methodical support of educational discipline «Designing devices on microcontrollers and FPGAs. Modeling of digital signals by means of MATLAB and VHDL. Microcontrollers. FPGA» for students of all forms of specialties: 125 – «Cybersecurity» (STPI), 151 – «Automation and computer-integrated technologies», 152 – «Metrology and Information-Measuring Technique», 163 – «Biomedical Engineering», 171 – «Electronics», 172 – «Telecommunications and radio engineering», 173 – «Avionics» / [Electronic resource] Authors.: I. Svyd, I. Obod, O.Vorgul, L. Saikivska, O. Zubkov. – Kharkiv, 2020. – 380 p. http://catalogue.nure.ua/knmz.</p> <p>2. Methodical instructions to laboratory works on discipline «Designing devices on microcontrollers and FPGAs. Modeling of digital signals by means of MATLAB and VHDL» for students of all forms of specialties: 125 – «Cybersecurity» (STPI), 151 – «Automation and computer-integrated technologies», 152 – «Metrology and Information-Measuring Technique», 163 – «Biomedical Engineering», 171 – «Electronics», 172 – «Telecommunications and radio engineering», 173 – «Avionics» / [Electronic resource] Authors.: I. Svyd, I. Obod, O.Vorgul, L. Saikivska, O. Zubkov. – Kharkiv,: NURE, 2019. – 75 c. – pdf 1,71 Mb.</p>
16.	The developer of the Syllabus	<p>Svyd Iryna, Head of Department of MTS, Candidate of Technical Sciences, Associate Professor iryna.svyd@nure.ua</p> <p>Obod Ivan, Professor the Department of Microprocessor Technologies and Systems, Doctor of Technical Sciences, Professor ivan.obod@nure.ua</p> <p>Vorgul Oleksander, Associate Professor of the Department of MTS, Candidate of Technical Sciences, Associate Professor oleksandr.vorgul@nure.ua</p> <p>Zubkov Oleh, Associate Professor of the Department of MTS, Candidate of Technical Sciences, Associate Professor oleh.zubkov@nure.ua</p> <p>Saikivska Liliia, Associate Professor of the Department of MTS, Candidate of Technical Sciences, Associate Professor liliia.saikivska@nure.ua</p>
